

A REFLECTION OF GROUP # 1 GRID

GROUP # 1: Skill Builder 5 Wave 1 Reflection and Participation

The best aspect of the project outcome was for my group members and I create and record information in our [Skill Builder 5 Wave 1 Group 1 Grid](https://docs.google.com/spreadsheets/d/1HOt7NiS6KM1nkNHaBPNEzVbO51Y683ubFaHo5rB-A/edit#gid=0) (https://docs.google.com/spreadsheets/d/1HOt7NiS6KM1nkNHaBPNEzVbO51Y683ubFaHo5rB-A/edit#gid=0) We have successfully sustained the purpose of the project in a timely manner. During this project I explore for my critically thinking skills, along with my interpersonal relation towards communicating appropriately with my team members for us to submit a successful project within its timeline. Conversely, the weakest aspect of our project outcome was to ensure that all group members contribute a appropriate information in our [Skill Builder 5 Wave 1 Group 1 Grid](#) that would support the purpose of the project. As the group editor and content manager of Group # 1 project, my most important contribution to this project was organizing our group members to get started and after I initiated our planning and discussion. This was imperative towards completing our project in a timely manner despite it encompasses independent tasks for each member. The purpose of creating the document for group members' roles and required tasks was for each group member to contribute their opinion on the particular roles and at the end of the discussion all group members will have a clear understanding of what each role entails on one page. Additionally if a need was required for a particular skill, the group member contributed their skills. Subsequently, my partners' contributed very critical issues in their feedback in our study group conference and collaborative document areas. The feedback from our group helps to guide our team members towards accomplishing the completion of our project in a successful and timely manner.

Next time, in order to improve the outcome of the project, I will ensure that we design a project document that disseminates information on the purpose, objective, methodology, findings and limitations of the project. Then each of my partners, including myself will develop a section with visual images illustrating the components of the project and post it in our study group area before we post any information to our [Skill Builder 5 Wave 1 Group 1 Grid](#) . An addition, our group uses the e-mail, private messaging, conference call, study group conference and other collaborative document areas to communicate. Nevertheless, the most effective way for me to communicate was through the study group conference and collaborative document areas. I do believe it was essential for us to communicate through our study group area since it was a classroom group project. However, I had no objection with communicating with my team members through e-mails, private messaging, and conference calls, despite my email inbox is always overloaded with several other mails.
